

PREPARTION SHEET FOR

SILVERFISH

For treatment to be successful the following preparation must be completed prior to service.

It is required for you to **remove all pets** and cover fish tanks **YOU MUST stay out of the unit during and after treatment for approximately 4 – 6 hours**. If you are pregnant or have any respiratory or medical issues it is recommended that you stay out of the unit for 24 hours.

Silverfish seem to pop up in places that **have** a lot of humidity or moisture, places such as the bathroom, laundry room, or basement. This is because these pests are drawn to moisture.

- Remove all old or ripped shelf paper, Reduce clutter, **Silverfish** feed on paper products and cardboard boxes.
- They tend to hide in cluttered areas, especially near sources of heat and moisture.
- **Move items away from walls, all items must be moved a minimum of six (6) inches away from walls throughout the entire home.**
- **Empty all lower kitchen & bathroom cupboards**
