How to prepare your home for a Preventative Dust Treatment

Important to know: Please note your unit will be inspected and treated with light dust for the purpose of any crawling/common insects.

Preparations Steps:

For treatment to be successful the following preparation must be completed prior to service. Sanitation is essential.

1. During this time, we will need **access to all baseboards and electrical outlets** throughout your unit.
2. Keep all bed(s) and furniture clear of bedding/clothing and other items for our technician to complete a thorough inspection
3. It is not necessary to leave the unit. However, it is recommended that all pet(s) and people are removed from the area while the technician is applying the dust.
4. **Please do not spray any household insecticides on or near the area which has been treated.**
5. **Please do not use any strong cleaners near the location treated.**

Acknowledgement; I agree that under no circumstances shall PEST CONTROL PLUS be held liable for direct or indirect injuries or damage to the building premise or contents stemming from the treatment. I, the client, waive any claims of liability against PEST CONTROL PLUS directly or indirectly caused by PEST CONTROL PLUS products, equipment or staff.
