

How to prepare your home for a Grain Beetle Treatment

Important to know: It is required for you to remove all pets and cover fish tanks. You must stay out of the unit during and after treatment for 4 hours. Persons with underlying health conditions should consult their family physician where they have concerns regarding re-entry time. Upon re-entry, please open windows for 20 min to properly ventilate the treated rooms.

Preparations Steps:

For treatment to be successful the following preparation must be completed prior to service.

1. Empty all kitchen cupboards/pantry
2. Go thorough all products such as dried food, rice, pasta, cereal, flour. If anything is old and expired chances are beetles are living inside.
3. Wash all containers in warm soapy water.
4. Vacuum and wipe down inside and out of all pantry/cupboards.

What spray kills grain beetles?

A residual, chemical insecticide can be an effective way to control Grain beetles, as the active ingredient controls for several weeks.
