

*Contemporary slim-line form compliments all washroom décor.*

*The unique SaniPod™ opening promotes the simple process of unobstructed 'posting' of waste while minimising sight into the unit. The opening is generous enough to receive sanitary waste, without inviting disposal of general rubbish.*

*The absence of a modesty tray eliminates unsightly surfaces and potential trapping of sanitary waste as well as allowing greater compaction under its own weight within the slim cylindrical form.*

*The compact wall-mounted design allows greater utilisation of washroom floor space and ease of cleaning under and around the unit.*

*The elevated mounting of the SaniPod™ improves the ergonomic access from both standing and seated positions.*

# SaniPod™

With industry-leading reliability, user-friendly performance and striking award-winning design, the SaniPod™ system sets itself apart as the best sanitary disposal system available today.

Designed by **fumacare** Limited, a New Zealand company with over 20 years experience in the hygiene service industry, the design establishes a new paradigm which is radically different in functionality and aesthetics to all existing sanitary bins and is available in touch-free and manual options in two sizes – MaxiPod and MiniPod.

SaniPod™ raises the benchmark for sanitary waste disposal. It provides customer delight with its unique features and precise technology. It is a state-of-the-art answer to a sensitive issue women have faced for many years – that is disposing of sanitary waste in a sophisticated and discreet manner.

Through improved design features, SaniPod™ has an enhanced ease-of-use and the flexibility to be utilised with a liner for self-service or as a total exchange service.

The complete SaniPod™ system includes unique liners, racking for vehicles and custom designed trolleys for efficient service procedures.

## **SaniPod™ auto**

---

A complete and innovative solution to sanitary disposal, SaniPod™ auto guarantees activation first time, every time and only when required. The touch-free design creates a first-class experience for women by minimising the risk of cross-contamination and its silent operation ensures total discretion.

Offering the ultimate in performance, the touch-free technology is contained within the wall bracket sensor box ensuring the electronics are permanently installed on each site. This protects the technology from the cleaning process and reduces the risk for damage and misuse, resulting in total reliability and providing a cost efficient service process.

## **SaniPod™ manual**

---

SaniPod™ manual provides a unique and exclusive option when touch-free technology is not required.

The telescoping top has been designed with a lifting ring which is positioned purposefully away from the opening where waste is deposited. This minimises contact for the user and reduces the negative perceptions that women associate with existing manually operated sanitary units.

The rotating top allows access from any angle with the wall mounting feature providing an innovative solution to all washrooms.

## **SaniPod™ liners**

---

SaniPod™ liners are precisely manufactured to fit all SaniPod™ sizes with no unsightly plastic over-wrap, ensuring the aesthetics of the SaniPod™ are maintained at all times.

SaniPod™ liners are easy to service offering a smart solution with minimal contact and efficient results.

Biodegradable liner options are available to meet all environmental standards and requirements.
