

How to prepare your home for a Carpet Beetle Treatment

Important to know: It is required for you to remove all pets and cover fish tanks. You must stay out of the unit during and after treatment for 4 hours. Persons with underlying health conditions should consult their family physician where they have concerns regarding re-entry time. Upon re-entry, please open windows for 20 min to properly ventilate the treated rooms.

What causes you to get carpet beetles?

Carpet beetles are attracted to food and perspiration stains on clothing, especially clothes made from wool blends, cotton, linen and synthetic materials. Do not let your dirty clothes sit out longer than a week if they have stains on them.

Preparations Steps:

For treatment to be successful the following preparation must be completed prior to service.

1. **You will need to remove the eggs, larvae, and adult beetles with intensive effort by:
Vacuuming and Steam Cleaning**
2. **Launder all pillows and clothing.**
3. **Spray and Wipe surfaces with vinegar**
4. **Move furniture and clutter away from all baseboards and electrical outlets**
5. **Vacuum along all baseboards prior to treatment... after treatment do not**
6. **wash/vacuum baseboards, you can let treatment sit for few weeks or longer**

What spray kills carpet beetles?

A residual, chemical insecticide can be an effective way to control Carpet beetles, as the active ingredient controls for several weeks.
